

How to do Construction Drawings with Revit

With the use of latest innovative technology we are able to generate construction drawings and drawings specs made to your demanding standards. Construction drawings with Revit involve planning and execution of the designs from transportation, site development, hydraulic, environmental, Structural and geotechnical engineers. Construction drawings facilitate a chronological description of each phase of the construction.

The following Construction Drawing Services-

- Shop Drawings - doors, cabinets, and small portable structures (pre-fabricated berthing quarters, and modifications of existing buildings).
- Presentation Drawings- layouts, contour mapping.
- Master plan Drawings.
- Product Drawings.

CAD designers for construction drawing services provide you with practical solutions - from conversions of designs into electronic drawings, comprehensive scanning & plotting services, to framing of civil drawings for maintenance or other requirements. The Construction drawings with Revit required documents like - Foundation plan, 3D floor plan design, 2D floor plan design, Mechanical plan, Engineering calculations, and Electrical service diagram.

Use updated version of AutoCAD as well as customized tools and software for design automation and efficiencies. Our technical and design teams can deliver finished construction drawings and design solutions as well as work with your development teams and customize solutions.
